

Marwood Arena County Durham

The Graham Heath Construction Team attended the Official Opening of this 50m x 30m Indoor Riding Arena in Barnard Castle, County Durham on Monday 29th October

Equestrian Surfaces were contacted by Sarah Tubbs at Marwood Equestrian to manage the project for her upcoming new riding arena in Barnard Castle, County Durham. The Graham Heath Construction Team were contacted to produce a quote for the steel framed building, which also included the use of the very stunning Highlight wall cladding. This wasn't the first riding arena for the end customer, as they originally had a 40m x 20m Outdoor Arena. The aim was to make the original arena unrecognisable, turning it into the stunning indoor arena it is today.

To begin the project, the old surface and fencing was removed, the grounds were relevelled, landscaped and footings were prepared ready for the erection of the steel framed building supplied by ourselves. The inside had new internal boarding fitted throughout, alongside Equestrian Surfaces' non-waxed training surface – this provides a stunning finish to the grounds.

The exterior of the riding arena was fitted with Juniper Green cladding on one side, but the stunning Highlight cladding on the right side and gable ends. Despite this cladding being used many times before, this was a first for Graham Heath Construction. Highlight cladding is a perforated steel side cladding sheet, manufactured from pre-galvanised steel coil which is polyester painted on both sides. Our customer's choice was Juniper Green on the exterior and light grey on the internal. The steel wall cladding gives superb ventilation and light transmission.
